Overview
The MPC8245 integrated host processor built on Power Architecture™ technology fits applications where cost, space, power consumption and performance are critical requirements. This device is designed to provide a high level of integration, which reduces the chip count from five discrete chips to one and can significantly lower system component costs. High integration results in a simplified board design, low power consumption and a faster time to market solution. This cost-effective, general-purpose integrated processor targets systems using Peripheral Component Interconnect (PCI) interfaces in networking infrastructure, telecommunications and other embedded markets. It can be used for control processing in applications such as routers, switches, network storage applications and image display systems.

Product Highlights
- 266 MHz–400 MHz processor core
- 32-bit PCI interface operating at up to 66 MHz
- Memory controller offering SDRAM support up to 133 MHz operation, support up to 2 GB
- General-purpose I/O and ROM interface support
- Two-channel DMA controller that supports chaining
- Messaging unit with intelligent input/output (I/O) messaging support capability
- Industry-standard inter-integrated circuit (I²C) interface
- Programmable interrupt controller with multiple timers and counters
- 16550 compatible dual universal asynchronous receiver/transmitter (DUART)

Typical Applications
- Wireless LAN
- Routers/switches
- Embedded computing
- Multi-channel modems
- Network storage
- Image display systems
- Enterprise I/O processor
- Internet access device (IAD)
- Disk controller for RAID systems
- Copier/printer board control
Technical Specifications

G2 Processor Core
- High-performance, superscalar processor core
- Floating-point unit, integer, load/store, system register and branch processing unit
- 16 KB instruction cache, 16 KB data cache
- Lockable portion of L1 cache
- Dynamic power management
- Software-compatible with the Freescale processor families built on Power Architecture technology

On-Chip Peripheral Logic
- Memory interface
- 133 MHz memory bus capability
- Programmable timing supporting SDRAM
- High-bandwidth bus (32-bit/64-bit data bus) to DRAM
- Supports one to eight banks of 16-, 64-, 128-, 256- or 512-bit SDRAM
- Supports 1 MB to 2 GB DRAM memory
- Contiguous memory mapping
- 272 MB of ROM space
- 8-, 16-, 32- or 64-bit ROM
- Supports bus-width writes to flash

CPU Speeds—Internal
- 266 MHz–400 MHz

CPU Bus Dividers
- 2.0, 2.5, 3.0, 3.5, 4.0, 4.5, 5.0, 5.5, 6.0

Memory Bus Dividers
- 1.0, 1.5, 2.0, 2.5, 3.0

PCI Interface
- 32-bit (up to 66 MHz)

Memory Interface
- 64-bit (up to 133 MHz) + 8-bit parity

Instructions Per Clock
- 3 (2 + branch)

L1 Cache
- 16 KB instruction
- 16 KB data

Typical Power Dissipation (est.)
- 1.3W @ 266 MHz (with FPU on and @ 1.8V)
- 2.8W @ 400 MHZ (with FPU on and @ 2.0V)

Package
- 352 TBGA

Process
- 0.25µ 5LM CMOS

Voltage
- 3.3V I/O, (1.8V–2.0V internal)

Dhrystone (2.1) MIPS
- 760 @ 400 MHz

603e Processor Core Functional Units
- Integer, floating-point, branch processing, load/store, PCI, DMA, memory control

Peripheral Logic Functional Units
- I/O, I2C, EPIC, ATU, PCI and memory clocks, ECC controller x2 DUART

32-bit PCI Interface Operating up to 66 MHz
- PCI 2.2V compatible
- PCI 5.0V tolerant
- Support for PCI-locked accesses to memory
- Support for accesses to all PCI address spaces
- Selectable big- or little-endian operation
- Store gathering of processor-to-PCI writes and PCI-to-memory writes
- Memory prefetching of PCI read accesses
- Parity support (selectable)
- Selectable hardware-enforced coherency
- PCI bus arbitration unit (five request/grant pairs)

PCI Agent Mode Capability
- Dual address translation unit (ATU)
- Run-time register access
- PCI configuration register access

Two-Channel Integrated DMA Controller
- Supports direct or chaining modes
- Scatter gather
- Interrupt on completed segment, chain and error
- Local to local memory
- PCI to PCI memory
- PCI to local memory
- Local to PCI memory
- Message unit
- I/O message controller
  - Two door-bell registers
  - Inbound and outbound messaging registers
- I2C controller
  - Full master/slave support
- Embedded programmable interrupt controller (EPIC)
- Five hardware interrupts (IRQs) or 16 serial interrupts
- Four programmable timers

Integrated PCI Bus and SDRAM Clock Generation Programmable Memory and PCI Bus Drivers Debug Features
- Watchpoint monitor
- Memory attribute and PCI attribute signals
- JTAG/COP (common on-board processor) for in-circuit hardware debugging

Dual UART

Contact Information
Freescale offers user's manuals, application notes and sample code for all of its communications processors. Local support for these products is also provided. Information can be found at www.freescale.com/powerarchitecture.
